

Tuscany State Well # 8947304  
Hosston  
Elevation: 1822 Well Depth: 800

This well has a pump in it. There is an obstacle that prohibits getting the static water level below 1380 MSL. That is why there are no levels on the graph between August 2008 and February 2010, and again now August 2010 until the static water level rises above the 1380 MSL.
